Add a nominee to your crypto.
Nobody learns who.

In Wave 1 we built it on Midnight: deposit, name your nominees, check in. Stop, and they claim.

Wave 1 paid out only in a simulator.

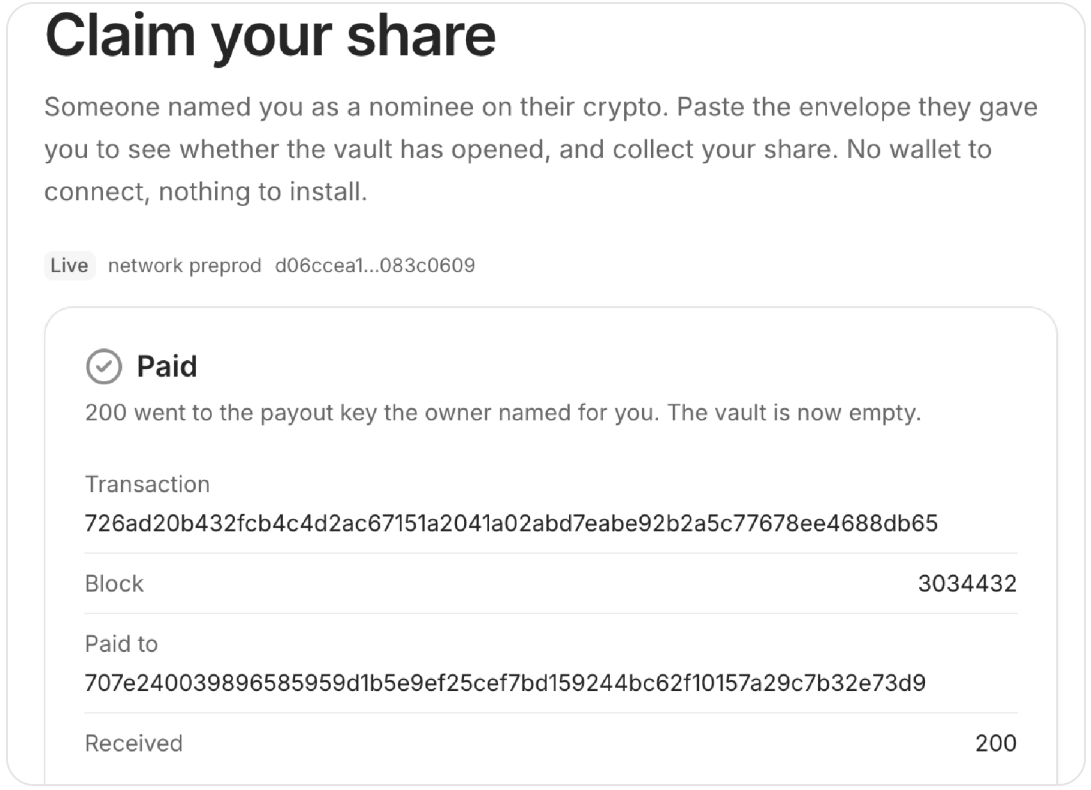

Wave 1	
Deposit	on chain
Heartbeat	on chain
Resolve	on chain
Claim	simulator

The judges asked
Is the heartbeat really the owner’s?
Does proof of life come from hardware?
How do you stop identity theft?
How do you stop a faked death?
Heirs without a wallet?

Wave 2 runs every step on Preprod.

What changed	
Payout	The contract pays each nominee, on chain.
Proof of life	Your secret plus a signature from your device.
Identity theft	A stolen seed can’t check in. A stolen envelope still pays the right heir.
Faked death	Resolve opens a veto window. The owner or two guardians can close it.
Wallets	Heirs paste an envelope into a web page and get paid.

Heirs need an envelope, not a wallet.

`paid on Preprod · block 3034432`

19 transactions. 3 payouts.
Not one name on chain.
